"Valvespout" Oilers Fig. 9880

The most important feature of these Oilers is the patent Spout, which has revolutionised the Trade by introducing a **positively leakproof Oil Can** with no cap or pin to work loose or be mislaid. The fluted Valve does all the work, a half turn one way or the other opens it or closes it and **when closed it is absolutely leakproof.** There are no washers or other loose parts.
